

Discover the Benefits of Clay Roof Tiles

- 100% natural material** manufactured in a modern environment friendly production facility
- Resistant to all weather effects** Adequate protection at all times
- Modern technology** and design ensure smooth surface and help in avoiding deposition of impurities
- Upper Groove System**
- Double Side Groove System**
- Rich color range and longevity** During firing, color and surface protection are fused with the clay resulting outstanding surface protection
- Breathable roof** 100% natural, eco-friendly, healthy living environment
- Advanced tile design** and high temperature firing process result in optimal weight and good mechanical strength
- During its long life** fired clay preserves values through generations

- The well-thought-out **double sided groove system** quickly drains water and protects the building against moisture or dust.
- The **upper groove system**, which has characteristics of clay roof tiles, offers maximum protection for slope/pitched roofs. The maze system prevents rain and dust from entering the roof.
